User Guide

Welcome to the book store information system. In this system one can add books, delete books and update details about the books. Similarly feature available for searching using price and book genre is also available.

Here are some points which may help while using the system:

- Duplicate book ID and book name cannot be added.
- To update, the user first needs to select a row from the table.
- The system can be exited from the menu section as well.
- To exit the system the user can use Ctrl + E.
- Using the delete button will delete the data of the selected row, from the table.
- Certain messages are displayed when an invalid input is entered.
- The user can also open an existing csv file to insert data in the table.
- The CSV file can be imported using Ctrl + O.
- Books can be searched based on price by entering the price in text field.
- Books can be searched by selecting a genre from the respective combobox.
- Clear button can be used to clear the selections from the text fields.
- Text fields accepting ID and price input will not accept character inputs.
- Text fields accepting book name will not accept number inputs.
- Text field accepting author name will not accept number and special character inputs.
